PROFESSIONAL SUMMARY

Ownership-driven Full-Stack Software Engineer (B.Tech CSE, 2026 Batch) with proven experience architecting, building, and deploying scalable web applications from scratch. Proficient across the core stack—JavaScript, React.js, SQL, and REST APIs—combined with modern AI/LLM-assisted workflows to accelerate development cycles. Known for taking end-to-end accountability, resolving complex production bottlenecks, and delivering high-impact solutions in autonomous remote environments.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), SQL, C++, C, HTML5, CSS3
- **Frontend:** React.js, Responsive UI Design, State Management
- **Backend & APIs:** Node.js, Express.js, RESTful API Design, JWT Authentication, WebSockets (Socket.io)
- **Databases:** PostgreSQL / SQL, MongoDB
- **DevOps & Version Control:** Git, GitHub, Render, Postman

FEATURED PROJECTS

Full-Stack Ride-Booking Platform (Uber Clone)

[Live Demo](#) • [GitHub](#)

React.js, Node.js, Express.js, MongoDB, Socket.io, REST APIs, JWT

- Owned the end-to-end lifecycle from system architecture and database schema design to responsive frontend development and cloud deployment.
- Implemented bidirectional real-time communication via Socket.io to manage dynamic ride events, driver-rider location synchronization, and live trip status updates.
- Built secure JWT-based authentication, role-based authorization, and robust error-handling middleware for structured REST API endpoints.
- Isolated and resolved asynchronous state synchronization issues under edge-case network conditions.

Real-Time Concurrent Chat Application

[Live Demo](#) • [GitHub](#)

JavaScript, Node.js, Express.js, MongoDB, Socket.io, REST APIs

- Developed and deployed a high-concurrency real-time messaging platform prioritizing low-latency delivery.
- Engineered custom WebSocket event dispatchers and connection pools to maintain stable socket lifecycles across active users.
- Implemented session persistence, token authentication, and optimized MongoDB queries for fast message history retrieval.

MyStay – Full-Stack Property Listing Platform

[GitHub Repo](#)

Node.js, Express.js, MongoDB, Mongoose, Multer, Cloudinary, REST APIs

- Implemented complete MVC CRUD architecture with granular user permissions, review systems, and listing management.
- Integrated Cloudinary and Multer pipelines for automated image validation, compression, and cloud storage.
- Validated server-side sanitization and handled continuous deployments across 20+ live listing environments.

NextChat – Real-Time 1-on-1 Messaging Platform

[Live Demo](#) • [GitHub](#)

Next.js, Appwrite Cloud, WebSockets, Tailwind CSS

- Direct messaging platform with instant delivery, unread indicators, and read receipts.
- Designed clean responsive interface with modern authentication and persistent cloud storage.

PROBLEM SOLVING & HIGHLIGHTS

- **Data Structures & Algorithms:** Solved 150+ LeetCode problems focusing on Graphs, Trees, Dynamic Programming, and Hash Maps in C++.
- **Ownership Mindset:** Proven track record of independently breaking down ambiguous feature requests into testable, production-ready code with minimal supervision.

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science & Engineering

Government College of Engineering and Leather Technology (GCELT), Kolkata

Expected 2026

CGPA: 7.5 / 10

Diploma in Computer Science & Engineering

The Calcutta Technical School (CTS), Kolkata

2020 – 2023

CGPA: 8.0 / 10
